

2. Requirement Analysis Phase: Customer Journey Map

Karanam Naga Venkata Sai Ganesh · EV Charge & Range Analysis

Objective

The Requirement Analysis Phase identifies the business requirements, user needs, system functionalities, and technology required to develop the EV Charge and Range Analysis dashboard using Tableau. This phase ensures that the project addresses user analysis challenges effectively.

A) Customer Journey Map

The Customer Journey Map illustrates the complete flow of an analyst or buyer using the EV visualization tool to make a decision. Each stage below is mapped to the actual worksheets and calculated fields built in the workbook, rather than a generic decision-making flow.

Stage	Customer Action	System Response / Goal
Discover	User opens Tableau analytics dashboard	Presents buyer, performance, India, and charging options
Explore	User reviews vehicle scatter plots and maps	Displays range, price, and charger location overlays
Filter	Narrows vehicles by brand, segment, powertrain	Updates worksheets with clean and relevant subset
Compare	Evaluates efficiency, speed, pricing, and charging infrastructure	Highlights cost per range km and underperforming models
Decide	Concludes on vehicle shortlist or infrastructure gaps	Provides exporting and sharing capability for insights

Customer Journey Flow Diagram

User → Open BI Tool → Explore Parameters → Apply Dimension Filters → Compare Range/Price → Review Local Charger Density → Select EV / Plan Infrastructure

Visual Reference: Customer Journey Through the Dashboard

The diagram below reflects the five stages and their actual customer actions / system responses from the table above — i.e., someone using this project's Tableau dashboard — rather than a generic physical car-buying/dealership journey.
